1) Restriction is required under 35 U.S.C. 121 to one of the following inventions..

Group I, claim(s) 16-22, drawn to a conjugate of a biomolecule having a structure as shown in claim 16 and a support and a pharmaceutical composition containing the conjugate, classified in class 424.

Group II, claims 27, 32 and 37, drawn to a method of inducing antibodies using the pharmaceutical composition of claim 22 and antibodies produced by the method, classified in class 530.

Group III, claims 42 and 43, drawn to a method of inducing passive immunity by administering an antibody of claims 32 or 37.

Group IV, claims 48-53, drawn to a method of inducing antibodies using the reaction product of a diene-biomolecule reactant with a dienophile-biomolecule reactant in a cycloaddition reaction (no requirement for any specific structures) and antibodies produced by the method.

2) The inventions are distinct, each from the other because:

a) Inventions *i)* I and *ii)* each of II and III are related as product and process of use.

The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the conjugate of Group I which contains a carbohydrate biomolecule could be attached to an affinity chromatography column and used to remove a corresponding carbohydrate-specific antibody from a biological sample.

b) Inventions *i)* I –III and *ii)* IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the method of Invention IV does not require the use of any compound having a structure as defined in Invention I.

c) Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using

the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the antibodies could be used as reagents in an affinity chromatography method to separate the corresponding antigen from a biological sample.

3) Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter requiring different fields of search and different patentability considerations, restriction for examination purposes as indicated is proper.

4) Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5) Applicant is advised that in accordance with the court decisions in *In re Ochiai*, {71 F.3d 1565, 37 USPQ2d 1127 (Fed. Cir. 1995)} and *In re Brouwer* {77 F.3d 422, 37 USPQ2d 1663 (Fed. Cir. 1996)}, in the event that a product claim is found to be allowable, a method of use claim ***which is of the same scope as the allowed product claim*** may be rejoined with the allowed product claim.

6) Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mary (Molly) E. Ceperley whose telephone number is (571) 272-0813. The examiner can normally be reached on 7:30 a.m. - 4:00 p.m..
